FLOOR CARE

## RUG & CARPET CLEANING AFTER CARE

Keep your carpets looking fresh and clean with our simple post-cleaning care tips. Follow these guidelines to ensure a quick, safe, and effective drying process.

## POST-CLEANING CARE

### DRYING TIME

- Most carpets will take 6-8 hours to dry completely in a temperature-controlled environment.
- Area rugs typically dry even faster.
- To speed up drying, keep your AC or heat on and run ceiling fans during this time.
- If the weather outside is dry, you may open windows briefly; however, due to humidity in this area, it's usually best to keep windows closed and AC or heat on for optimal drying.

### WALKING ON DAMP CARPET

- Avoid walking on damp areas with shoes to prevent dirt or residue transfer.
- Walking barefoot or in socks is fine, but be careful! Damp feet may be slick, especially when stepping from carpet to tile or other hard floors.

### FURNITURE CARE

- Any furniture moved during cleaning should remain off the carpet until it's fully dry.
- If furniture must be returned before the carpet is dry, we'll place plastic or styrofoam protectors under the legs to prevent staining or damage.

Thank you for the great customer service and excellent job on the carpets. My carpets looked SO bad. I didn't think anything would help. My carpets still look like new. - Amy

- Family owned and operated since 2009.
- Serving Georgetown, TX and surrounding area.
- Affordable price for quality work.
- Our code of ethics is hard work and honesty.
- We treat you like we want to be treated.

Professional carpet cleaning that removes dirt and allergens. Contact us for a **FREE** estimate.
